

Dear Hiring Manager,

As a highly motivated Computer Science student from ABES Engineering College, I've built impactful full-stack projects like Drive-Connect and a QR-Navigated Parking System using JavaScript, React, Node.js, and MongoDB. My experience with REST APIs, JWT authentication, cloud tools like MongoDB Atlas, and DevOps practices aligns with Mastercard's distributed microservices architecture.

With proficiency in Java, Python and MERN Stack Development, I've integrated machine learning models in my Sales Prediction System and managed scalable frontends using React and Tailwind CSS. I've also contributed as a DSA Training Assistant and Hackathon winner, consistently pushing for better code, clean architecture, and automation — embodying Mastercard's engineering culture.

I am also attaching my resume link here for your reference
